Report

Department Of Science organized HB and Blood Group Checking Camp at Hanuman Temple in Walve on 5 march 2022, keeping in view the growing imbalance of man-women's ratio and various health issues of Human. Human health refers to the health of man and women, which differs from that of men in many unique ways. Women's health is an example of population health, where health is defined by the World Health Organization as "a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity". Often treated as simply women's reproductive health, many groups argue for a broader definition pertaining to the overall health of women, better expressed as "The health of human".

These differences are further exacerbated in developing countries where women, whose health includes both their risks and experiences, are further disadvantaged.

The purpose of HB and Blood Group Checking Camp is – To raise awareness about the status and ratio of HB percentage in that area as well as which type of blood group is present in high amount so including that purpose we arranged the health camp at village Walve.

In this camp our students of Science checked the blood groups, HB of native men's, women's and high school boys and girls without any cost. For this Social Activity responsible persons Mr. S.M.Powar, Miss Pooja Chiturkar, Miss. Kajal Balugade and all members of Hanuman Temple Committee were present at place.

We conducted camp in Walve village. We did this camp concern with Hanuman of Walve. For this Hanuman Temple Committee members were present. Almost 70 devotees participated in camp. In these camp ladies and gents were present. Especially gents were interested to check and count blood group and HB respectively.

Out of these 70 devotees more than 80% had O + ve group and A +ve. Most important thing is only 10 % peoples have B + ve group. From this we concluded that 1 or less than 1 % peoples have O – ve B– ve group and also we found that A – ve and O – ve blood group peoples were less than 1 %.

HB count is most critical in rural areas. We took HB count which has 10 to 11 in range, which should be in range of 13.5 to 17.5 gm/dl for men and 12.0 to 15.5 gm/dl for women. But we found that women's HB count is 10 or less than 10. Now it's necessary to educate or aware all the peoples especially women's what is the importance of Haemoglobin in humans body. Turambe grampanchayat genuinely supported us.
