## Photographs

our students spreading awareness among the people about the Dengue fever.

## Report-

As part of the curriculum, our M.Sc, Analytical Chemistry Students are required to do extension activity to get marks and credits. In this regard every year our department was organising an extension activity programme in which our 1<sup>st</sup> year students and staff members were actively involved.

This year all the students and staff members of our department of chemistry actively participated in the dengue awareness programme which was jointly organised by the Analytical Chemistry department and our College on 10.10.2022. The objective of that programme was to create awareness among the people about the causes, consequences and the preventive measures of Dengue fever.

Students visited the houses one by one in Kamble Galli, Mhakave and searched the causes for the growth of dengue mosquito in each house. Then they gave tips to the housemates that how to avoid the growth of dengue mosquitos.

That awareness programme was very useful for our students to get knowledge about causes, consequences and the preventive measures of Dengue fever and also for the people to get awareness about the Dengue fever through our students.
