Miss Gaytri patil successfully conducting the Visit. A Total of 20 students participated in this Event. The visit was organized to student for getting information about healthy child

BMI is an estimate of body fat and a good measure of your patients risk for us that occur with overweight and obesity. A healthy weight is defined in the appropriate body weight is defined to height. This ratio of weight to height is known as the body mass index (BMI)

Normal BMIs for boys range from 13.8-16.8 for a 5 year old, normal girl BMIs include 13.6 6.7 for a 5 year old, Children who maintain a normal, healthy body mass index, or BMI, have a reduced for obesity and related health problems. Children's BMI are determined using their height, weight, age gender. Although BMIs are calculated the same the way as for adults, the results for children are detected very differently.

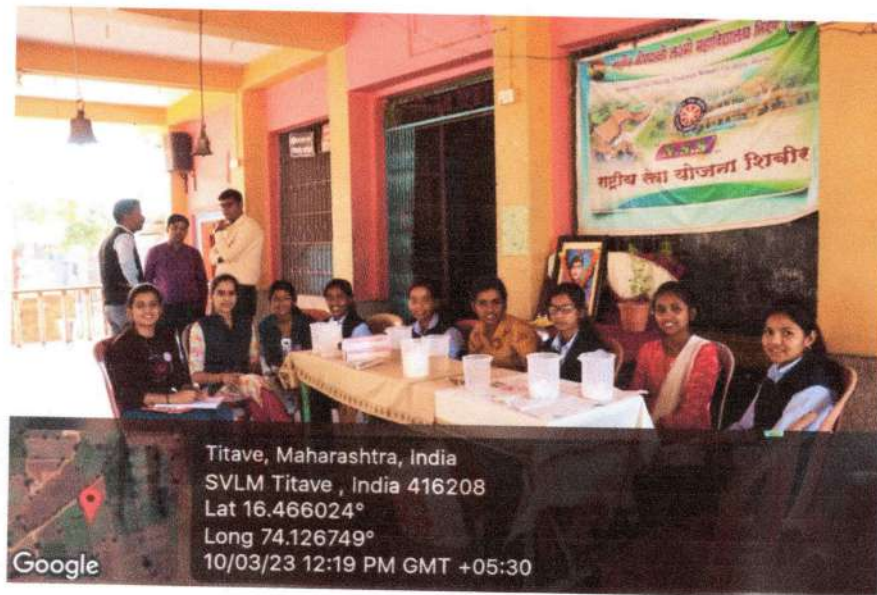

According to the Centers for Disease Control and Prevention, or CDC, kids with BMIs ween the 5th and the 85th percentiles fall within a normal, healthy range. However, if you're child's RMI the 85th percentile or above based on his gender and age he is considered overweight or obese, rding to the CDC. Children with BMIs that drop below the 5th percentile are classified as underweight.
