Covid-19 Vaccination Awareness Activities

A corona virus is a kind of common virus that causes an infection in your nose, sinuses, or upper throat. Most corona viruses aren't dangerous. In early 2020, after a December 2019 outbreak in China, the World Health Organization identified SARS-CoV-2 as a new type of corona virus. The outbreak quickly spread around the world.

COVID-19 is a disease caused by SARS-CoV-2 that can trigger what doctors call a respiratory tract infection. It can affect your upper respiratory tract (sinuses, nose, and throat) or lower respiratory tract (windpipe and lungs). It spreads the same way other corona viruses do, mainly through person-to-person contact. Infections range from mild to deadly.

The world is in the midst of a COVID-19 pandemic. As WHO and partners work together on the response -- tracking the pandemic, advising on critical interventions, distributing vital medical supplies to those in need they are racing to develop and deploy safe and effective vaccines.

Vaccines save millions of lives each year. Vaccines work by training and preparing the body's natural defences – the immune system – to recognize and fight off the viruses and bacteria they target. After vaccination, if the body is later exposed to those disease-causing germs, the body is immediately ready to destroy them, preventing illness.

Wearing masks and staying 6 feet apart from others help reduce your chance of being exposed to the virus or spreading it to others, but these measures are not enough. Vaccines will work with your immune system so it will be ready to fight the virus if you are exposed.

BCA Department of Shahid Virpatni Laxmi Mahavidyalay, Titave and NSS Jointly has arranged activities which create **Covid 19 Vaccination Awareness** on Friday , 14 May 2021

Activities such as making **E-Poster, Video** with awareness messages, **Whatsapp Statuses** on Importance of Covid-19 Vaccination by students. After created those things students also share related messages to others.

CORONAVIRUS

IF YOU HAD THE CHANCE TO PROTECT YOUR LOVED ONES WOULD YOU?
BY RECEIVING THE COVID-19 VACCINE YOU CAN!
 As a vaccinated member of society, you will help protect vulnerable members of the community through **HERD IMMUNITY!**

HERD IMMUNITY occurs when the spread of a disease is unlikely because a large percentage of the population is immune to the disease. **This protects those who can't get the vaccine, such as immunocompromised people and elderly people.**

We need YOU! Every person counts!

Corona ka bhay kab tak...
 Vaccine lo tab tak !!

CORONAVIRUS

STAY HOME

HOW VACCINE WORKS ?

- The Patient is injected With Weakened, Inactive Or Harmless Disease Agents.
- The Patient's Immune System Reacts By Producing Antibodies To Recognize The Disease.
- If The Patient is Infected Later, Their Immune System Is Ready To Fight Off The Disease.

VACCINES PROTECT US AGAINST HARMFUL DISEASES

They use your body's immune defenses to protect us from infections.

They train your immune system to create antibodies.

And this prevents us from getting sick.
